EVERY CAR, TRUCK, BUS IS A MARKET FOR SAFETYLIGHT BUT HERE ARE SURE-FIRE SALES

DOCTORS	AMBULANCES	TAXICABS	INTERSTATE TRUCKS
VETERINARIANS	POLICE CARS	ALL BUSES	PUBLIC UTILITY CARS
SALESMEN	FIRE APPARATA	TOURISTS	DELIVERY TRUCKS

ALL CITY, COUNTY, STATE, FEDERAL AUTOMOTIVE EQUIPMENT

Safety in Night driving in modern high speed autos, trucks, and buses, demands a powerful, concentrated, non-glare, long-distance light beam that will penetrate beyond the range of head lights.

Safetylight . . . with its quarter mile beam thrown on right hand edge of road . . . is the answer. Its powerful beam cuts through opposing glare . . . prevents blinding . . . shows up every road hazard . . . eliminates possibility of out-driving one's lights or one's eyes.

Finger-tip pressure instantly turns the 143,000 or 150,000 C.P. Beam in any direction to spot street and road signs, house numbers, objects off the road, etc. It permits instant adjustment on winding roads.

It is Easily . . . Quickly . . . Installed on any car, truck, bus.

It is approved and recommended by leading car, truck and bus manufacturers.

UNITY MFG. CO., • 2909 Indiana Ave., • Chicago, Illinois

Installing a Safetylight is simpler and easier than installing a radio or heater. No special tools needed. Four simple steps.

See below.

Position template enclosed with each bracket set in the manner shown above. Spot and drill two 1/8" holes.

Position the bracket over the 1/8" drill holes and attach with self-threading screws.

Put drill bushing in outside bracket and drill hole with 1/2" drill. The angle is pre-determined by bracket and drill bushing. Hold drill level.

Press light through drilled hole—attach inside bracket, adjust frictions and the stop. Attach wire to ammeter. *That's all there is to it!*

SAFETYLIGHT OFFERS YEAR 'ROUND MARKET

SAFETYLIGHT BRACKETS are cast in brass to fit contour of corner posts of cars without filing or fitting.

The illustrations on side of this page show how easy it is to install a Safetylight. Complete instructions, templates and hardened drill bushing accompany each set of brackets.

BRACKET SPECIFICATIONS

Number before dash indicates outside, number after dash indicates inside, bracket. Always list both numbers, thus 60-4, when ordering brackets.

*Special Standard Lincoln Zephyr Light.....\$20.00

N.B.—When brackets are ordered for cars not listed (Older models, convertible or open model cars) always specify Make, Model and Year of cars for which desired.

For right hand installations order right hand lights and right hand brackets, specifying Make, Model and Year of car, bus or truck.

TRUCK—BUS INSTALLATIONS

Unless otherwise specified above, Safetylights invariably can be installed on trucks and buses with our Universal Brackets, No. 52-23 or 70-4. If further data are desired, write us giving Make, Model and Year of truck or bus.

We advise against installation of lights through roof of cabs, but if customer insists on same, order Bracket No. 100-6 for such installations, using regular models of Safetylights.

SUGGESTION TO JOBBERS

Safetylights may be ordered with brackets or without brackets, and any brackets desired ordered and billed separately.

It is recommended that jobbers stock Safetylights without brackets—and carry a selected stock of brackets separately. Any set of brackets may be used with either model light, hence a good stock of brackets assures rapid turnover of lights or big profits with low investment.

Safetylight is backed by national advertising . . . this advertising spells profits for smart dealers who tie in with it. Free display stands and literature available to jobbers and dealers.
